

Full Stack Engineer

The product team cannot wait to meet you!

Vamp's platform connects the world's best creators and brands. Our platform generates custom, mobile content through combining great technology with a full-service influencer and social media marketing approach.

We are on the hunt for a Senior Full Stack Engineer for our passionate, enthusiastic and rapidly growing team based here in Vamp HQ in Sydney. We are on a rapid growth journey and technically speaking, you get to determine its future.

Why Work for Vamp?

- Great opportunity to learn and work with modern technologies.
- Vamp leads are passionate about the company's vision, and want you to be part of building this journey.
- Work in a fun and supportive team environment that actively works to make the day to day awesome.
- Be a part of an international company, operating in Australia, Singapore, Tokyo, Jakarta, Dubai and London.
- Above all, you get to build and be part of software that gets used in 61 countries by the largest consumer brands in the world

About the Role

As a senior full stack software engineer at Vamp, you'll be:

- Developing new features and iterating on existing features in our front and back end applications.
- Integrating 3rd-party APIs such as Instagram, Facebook, Twilio, TikTok, Google, etc. into the Vamp application.
- Continually maintaining and optimising our codebase.
- Completing analysis of feature design/architecture and comparing alternative technical solutions.
- Contributing ideas on improving the development process.
- Mentoring junior members of the team.
- Working independently and as part of an agile team.
- Based in Sydney.
- Bringing your thoughts to solutions and ways to implement them both at an individual level and in team work.
- Management experience is welcome but not essential.

Talk tech to me...

At Vamp our technology stack is Elixir / GraphQL / React and React Native.

To be able to excel in this role, you will need to possess at minimum the following technical know-how:

- 2+ years proven web application development experience
- Experience building with React and React Native
- Popular server-side frameworks such as Ruby on Rails or PHP/Laravel
- SQL databases such as MS-SQL, MySql, or PostgreSQL
- Some knowledge on server administration
- RESTful APIs

You'll also find it easier to get your hands dirty if you have worked with these before:

- Elixir / Phoenix
- GraphQL / JSON APIs
- PostgreSQL
- AWS / Heroku / Netlify
- 3rd-party API integrations (i.e. Instagram, Facebook, Twilio, etc.)
- TDD
- Functional programming paradigms

Product Team Culture

It's important that our team culture fits you - and provides a ground for growth, challenge, and satisfaction.

- Do you take ownership of the team's work even though you were not involved in its initial creation?
- Do you welcome changes without getting defensive of the time and effort already spent on a piece of work?
- Do you continually look at the current team processes and see ways to improve them?
- Are you looking for a place where you can learn and develop your professional skills?
- Are you seeking somewhere you can bring your whole self to work?

If you answer 'yes' to these questions, then we'd be thrilled to meet you.

How to Apply

Show us what you've got and apply now. We are excited to grow our team and to have you in it as part of our exciting journey.
